European Clean Mobility Infrastructure owner & operator

Siemens(1905) –
“Elektrische Viktoria”

“Back to the Future”

Lohner Porsche (1900) – the world’s
first zero emissions vehicle

What is Charging 4 Motion?

A new company focused in Clean Mobility infrastructure in Europe

- ✓ Combining the most promising technologies: electroMobility & Hydrogen
- ✓ We aim to be one of the biggest owners and operators of infrastructure in Europe through:
 - ✧ Acquiring companies and existing portfolios of operating charging infrastructure.
 - ✧ Expanding it through further development projects.
- ✓ Blending Private Equity and Infrastructure methodologies to catalyse best service and re-risk the project.
- ✓ Targeting a balanced combination of: Home, Office & Destination.
- ✓ With strong roots in eMobility and Artificial Intelligence: We combine both in order to maximize services and optimizing processes.

How does it work?

- ✓ **B2B Service:** Charging 4 Motion (C4M) provides access to CleanMobility infrastructure to companies and public entities;
- ✓ We analyse the individual needs, then we design, install and operate (as CPO) the infrastructure;
- ✓ **Why big Capex?:** Clients don't need it. C4M bears the cost of the infrastructure – CAPEX-;
- ✓ **Long term partner:** C4M enters in long term rental contract with the clients, providing them a fully operative charging infrastructure;
- ✓ In case the client has, C4M acquires the **existing infrastructure** and incorporate it to the agreement;
- ✓ **Slow & Mid charging:** C4M is focused in up to 50 kWh (focus 22kWh). Infrastructure can include fast charging based on individual analysis;
- ✓ **Clear focus: Assets.** As an pure-play owner-operator, C4M is not actively seeking to be involved in the business of delivering the electricity (EMP), unless is asked to do so by the clients;
- ✓ As an **independent owner** of assets, C4M works with a variety of service partners, choosing best alternative and adequate any preference of the site-owner (client), but only using first-in-class parties.

FULL SERVICE

FINANZIERUNG - BETRIEB

Owned and lead by MvM Capital

- MvM Capital is a German private alternative investment firm focused in Sustainability Investing (www.mvm-capital.com). We search for good projects, structure a deal (being through an acquisition or setting up from scratch), inject the initial equity and then look for an institutional investor who comes with us in the deal as co-investor. Our main focus is in Artificial Intelligence, CleanMobility & CleanTech, MedTech & LifeScience, and Water. Those sectors, which we think that can, improve the Human Life.
- MvM Capital is led by **Hugo Mérida-Barba**, who has +25 years top management investing experience across the world (EU, NY, HK). Hugo did his first investment in eMob in 1997. Since 2012 he has been co-investor and advisor of different companies and projects in Europe, as well as got in contact with relevant international projects like Lumen (Brazilian project to develop the e-mobility in the country), ERAN-Net (same in Europe). From 2016-2018 Hugo worked in the launch of a VC Clean Mobility Fund, and from 2016-2019 co-launched and co-manage Power to Motion, an eMobility, e-Car Sharing and Digital-out-of-Home infrastructure project.
